

Comar Testimonial:

Comar is a specialty packaging and dispensing provider with a longstanding reputation for developing creative, industry-compliant packaging solutions for the Medical, Consumer Healthcare, Personal and Home Care, Food & Beverage, and other niche market segments. Since its formation in 1949, Comar has focused its business model on creative product development, first-class customer service, and efficient manufacturing centered around engineering excellence, continuous innovation, and technical expertise.

The Company has completed two recent investments at its Buena, NJ campus. The first, a state-of-the-art Innovation Design Center that is outfitted with the latest design and simulation tools and technologies that allow customers to see concepts and touch and feel physical products manufactured on-site. The "ID Center" will house a team of top-tier industrial designers and a full complement of material, process, infrastructure, and automation engineers with an average of 27 years of experience.

In addition, the Company also completed the design, construction, and initial qualification of a 6,500-square foot Class 100,000 clean room for the manufacture and assembly of a high volume, multi-component medical device. In total, the Buena operations facility is home to nearly 250 employees and includes 172,000 square feet of manufacturing and warehousing space.

Comar's CEO, Mike Ruggieri, said, "The decision to build out our corporate innovation center and the new hard wall clean room in Atlantic County was a no-brainer due to the talented and dedicated employee population, proximity to our manufacturing plant network and major metropolitan areas, and the business-friendly environment."

Thanks
Scott
